The Many Benefits of Dry Powder Inhalation

Advanced Delta 8 Nano Powder is up to 2 times more potent than vape.

Simple, Clean and Precise.

Immediate Onset

Fast and clean absorption. The user will experience the effects in less than a minute.

Discreet

No smoke or vapor, your Dry Powder Inhaler can be used everywhere without restriction. Small, odorless, and smokeless.

Safer

Smokable products can contain harmful toxins and carcinogens. With dry powder inhalation, users avoid all the concerns associated with smoking.

Precise Dosing

Your Dry Powder Inhaler uses powder capsules. This means that you get a precisely measured dose each time that you use your Dry Powder Inhaler.

How to Use

3 easy steps to experience Delta 8, the best way possible.

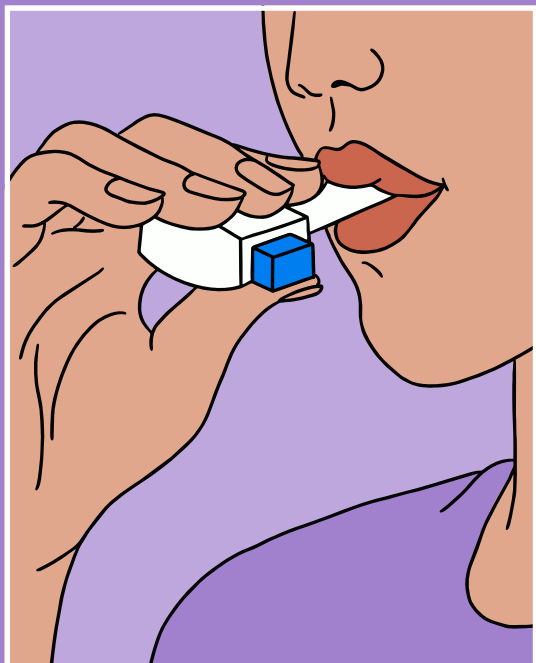

1

Remove the inhaler cap and pivot the mouthpiece away from the base. Then, insert a capsule into the cavity.

2

Pivot the mouthpiece back into place. Then firmly press and release both side buttons 3-5 times.

3

Rest the mouthpiece just beyond your teeth and inhale steadily and as deeply as you can for 3 seconds.

Single Dose Cartridge

RELIABLE

CLEAN

PRECISE

Why Do We Use Cartridges?

Unlike vape pens, powder cartridges provide pure, precise and carefully measured doses. There are no harmful ingredients as used in vape and smokable products.

Each capsule contains a carefully measured dose that you can count on.

Proven Pharma Technology

The pharmaceutical industry has utilized breathable inhalers as a means for pulmonary drug delivery with long proven results. Particles are inhaled, then absorbed by the pulmonary system and immediately introduced into the circulatory system. Users can experience benefits in less than a minute.

Next Generation Delta 8

Super Nano

We only use ultra-high-purity nano encapsulated Delta 8. Our powder is designed to meet the rigorous Pharma industry standards for pulmonary powder delivery.

Exact Dosing

We offer two dose sizes. For the average user 5 milligrams is the most popular. Since the effects of a single dose are experienced within 1-2 minutes. The user can take additional doses as needed.

We also offer a 20 milligram dose size for users who have sufficient experience in their dosing requirement.

Higher Potency

Nano encapsulated dry powder is much more potent than the equivalent amount of Delta 8 found in a tincture or an edible product. Expect at least 2-3 times greater effect, and a much faster onset of the experience.

Ordering Is Easy!

Experience this breakthrough for yourself! See below for details on how to order.

Frequently Asked Questions

FluxxLab™ is the world's most potent and effective Dry Powder Inhaler for Delta 8.

Do I need 5 milligrams or 20 milligrams?

For most users, 5 milligrams is a full dose. Experienced users who have a high tolerance for Delta 8 may wish to use the higher 20 milligram dose size.

How does inhaling compare with vaping or smoking?

Dry powder does not contain the harmful ingredients found in vaporizers.

How do the cartridges work?

Your FluxxLab Dry Powder Inhaler uses unique, tiny cartridges. Each cartridge contains a precise dose of Delta 8 powder. The cartridges are easy to fit and replace. Your Inhaler usually comes with 20 cartridges. Instructions for how to use the inhaler are in each package. There is also an instructional video on the website.

Why does it make me cough?

It may take a little time to get used to breathing dry powder and it can induce a cough response. Regular use generally diminishes or even eliminates the urge to cough for most users. Most users report a very pleasant after experience.

Frequently Asked Questions Continued

Can I swallow the capsules?

For maximum effectiveness, our capsules are designed to be used with the inhaler, which ensures rapid, efficient absorption. It is also safe to swallow the capsules. Swallowing the capsules will delay the effects by up to an hour and may be less intense.

What if 5 mg of Delta 8 THC isn't strong enough?

A 5 milligram dose is very effective. Users who have previously developed a tolerance for THC may find that they need additional doses. If after waiting 5-10 minutes the 5 milligram dose has not generated the desired effect, then additional doses may be appropriate. There is also a 20 milligram dose size available.

What are the ingredients?

The nano encapsulated powder is made from nano encapsulated Delta 8 and a completely safe, vegan, gluten free sugar.
